

Professional Profile

- Node.js Backend Developer with **8+ years of IT experience**, including **6+ years of strong hands-on expertise in backend development with Node.js, JavaScript, and AWS serverless services (Lambda, API Gateway, DynamoDB, S3, SNS, SQS)**.
- Experienced in designing and developing **RESTful APIs**, writing **unit test cases**, and **refactoring existing code** to improve maintainability and performance.
- Skilled in implementing **serverless architectures** and **cloud integrations** using AWS to build scalable and cost-efficient solutions.
- Strong background in **debugging, code optimization, and production support**, ensuring reliability and high availability of applications.
- Proficient in working within **Agile Scrum teams**, using Git for version control and CI/CD pipelines for continuous delivery.
- Excellent communication and problem-solving skills with the ability to work both independently and collaboratively.

Highlights and Essential Skills

- ✓ Working as a Software Engineer for the web app development team at Hyniva.
- ✓ Having proficient knowledge in functional components and Redux & Aws Lambda functions.

Backend & Languages	Node.js, JavaScript (ES6+), REST APIs, JSON
Cloud & DevOps (AWS)	AWS Lambda, API Gateway, DynamoDB, S3, SQS, SNS, CloudFormation, CloudWatch
Database	DynamoDB, MySQL
Version Control & Tools	Git, CI/CD, VS Code, JIRA, Agile Scrum
Front-End (Previous Experience)	Angular, TypeScript, HTML5, CSS3, Flutter, Dart.
Operating System	Linux, Mac Os, Windows

Professional Experience

Hyniva: Sr. Developer -- April 2017 to September 2025

Project: Victory Capital Management (VCM)

Duration: 2022 – 2025 Sep

Technologies: Node.js, JavaScript, AWS Lambda, API Gateway, DynamoDB, JSON, JIRA, Git

Responsibilities:

- Built secure and scalable RESTful APIs using Node.js and JavaScript.
- Designed serverless backend architecture with AWS Lambda and API Gateway.
- Managed structured data using DynamoDB, ensuring performance and scalability.
- Monitored applications using AWS CloudWatch and managed deployments with Git workflows.

- Participated in Agile sprint planning and issue tracking using JIRA.

Project: Veteran Loan Fund (VLF)

Duration: 2021 – 2022

Technologies: Node.js, JavaScript, AWS Lambda, API Gateway, DynamoDB, PostgreSQL, Angular, TypeScript

Responsibilities:

- Developed core backend logic and API services using Node.js.
 - Implemented AWS Lambda functions and API Gateway endpoints for business operations.
 - Integrated DynamoDB and PostgreSQL for hybrid data needs.
 - Previously contributed to Angular/TypeScript components early in the project lifecycle.
-

Project: PFC (Patriot Fund Connect)

Duration: 2021 – 2022

Technologies: Node.js, JavaScript, AWS Lambda, API Gateway, PostgreSQL, Angular

Responsibilities:

- Designed Node.js APIs and managed backend integrations with AWS.
 - Deployed and managed Lambda-based services on AWS.
 - Collaborated with front-end developers; occasionally contributed to Angular UI modules.
-

Project: Tresa

Duration: 2018 – 2021

Technologies: Node.js, JavaScript, REST APIs, PostgreSQL, Angular, TypeScript

Responsibilities:

- Developed backend systems in Node.js, with initial contributions to Angular-based frontend using TypeScript.
- Designed and consumed RESTful APIs, managing data flow between client and server.
- Integrated third-party APIs and contributed to building reusable front-end components (earlier in the project).

Educational Qualification

- Master of Computer Applications from Annamacharya Institute of Technology and Sciences, Rajampet 2012 year
- B.sc from Govt Degree College from Sri Venkateswara University, Tirupathi in 2009 year

Career Transition Summary

- After completing my Master's degree, I initially pursued opportunities in the teaching field and also prepared for government sector (civil services) examinations. During this period, I developed strong analytical and communication skills. Although I did not secure a government position, this experience strengthened my problem-solving and discipline.
- Subsequently, I transitioned back into the IT field, starting as a Product Support and Manual Testing Engineer. I later gained experience in mobile app development using Flutter, and for the past 6 years, I have been fully focused on backend development using Node.js and AWS services.
